

**PLEASE REMEMBER TO PUT A CLEAN FLOAT ON, IN BETWEEN EACH CASK CHANGE**  
 (To eliminate the risk of cross-contamination between casks.)

Widge Floats are available in 3 pre-cut and colour coded options:

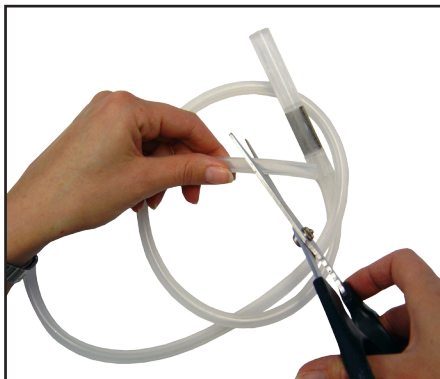

RED FLOAT 9 – 11 gallons

BLACK FLOAT 18 – 22 gallons

CLEAR FLOAT up to 36 gallons (Self Cut)

When using the clear floats, cut the float pipe to length, depending on the size of the cask.

note: pipe length to be cut from pipe end to pipe end, not including float this will ensure the float is in the correct position under the 'top break', see photo.

***The pipe can be cut with conventional scissors.***

It is essential that the pipe is cut to the correct length cask size (gallons):

PIN	4 1/2 gallons:	40-42cm
FIRKIN	9 to 11 gallons:	57.5cm
KILDERKIN	18 to 22 gallons:	75cm
BARREL	36 gallons:	Leave full length

**\*REMEMBER\***

USE RED FLOAT for 9-10-11gallon casks

USE BLACK FLOAT for 18-22 gallon casks

**\*TECHNICAL TIPS\***

When removing the float from an empty cask remember the keystone may have hinged. If you feel any resistance - **TWIST, DON'T PULL THE PIPE!!**

When removing the float pipe from either the Float Head or from the bottom of the Black 'T' Piece. Do not pull the tube - this will stretch and tear the tubing. Hold firmly at the contact point and twist the pipe to facilitate ease of removal - **DO NOT FORCE!**

**CHEERS!**
